

Komal Shehzadi

Principal Software Engineer

📍 Lahore, Pakistan | dev.komalshehzadi.com

PROFESSIONAL SUMMARY

Principal Software Engineer with 4+ years of experience turning complex engineering challenges into fast, scalable, and maintainable products. Specializes in React, Angular, TypeScript, and .NET Core, with a rare depth in data-intensive systems — including a WebGL/D3.js visualization engine that rendered million-pixel semiconductor datasets 70% faster. Equally strong as an individual contributor and as a technical leader: sets engineering standards, grows junior talent, and bridges product, design, and backend to ship with precision. Recognized as Achiever of the Month four times at Techlogix and a finalist in an internal AI Hackathon — a consistent top performer who raises the bar wherever they work.

CORE COMPETENCIES

Frontend	React, Angular, AngularJS, TypeScript, JavaScript (ES2022+), Tailwind CSS, Bootstrap, Material Design, Shadcn/UI
Visualization	D3.js, WebGL, Konva.js — million-pixel datasets, real-time rendering
Backend	Microsoft ASP.NET, .NET Core, RESTful APIs, Firestore
Data	SQL Server, Firestore (NoSQL)
Practices	Agile/Scrum, code review, mentoring, component-library design, performance optimization, ADA accessibility
AI/GenAI	GenAI API integration, AI-powered code generation, rapid prototyping

PROFESSIONAL EXPERIENCE

Principal Software Engineer · [Techlogix](#)

Jan 2026 – Present

Lahore, Pakistan

SECP LEAP Portal — Senior Angular Lead

- Spearheaded front-end architecture for a high-stakes government regulatory portal, designing a modular Angular component library that significantly improved build consistency and reduced onboarding friction for new team members.
- Drove performance gains through strategic lazy loading and restructured state management, cutting initial load times and improving runtime responsiveness across complex regulatory workflows.
- Defined and enforced engineering standards — coding conventions, code-review processes, and documentation practices — while actively mentoring junior engineers, raising the team's overall quality bar and shipping velocity.
- Served as the technical bridge between product, backend, and QA teams, translating ambiguous regulatory requirements into clean, accessible, and audit-ready UI solutions.

Senior Software Engineer · [Techlogix](#)

Mar 2023 – Jan 2026

Lahore, Pakistan

Authentix — Track & Trace (Oil & Gas)

- Slashed manual product verification time by ~60% by engineering a robust, scalable front-end for Authentix's Track & Trace solution — handling 100,000+ product units with real-time traceability across the supply chain.
- Transformed operational reporting for an Oil & Gas digital program, rebuilding data-dense UIs that cut report generation time by ~50% and gave field teams significantly clearer visibility into live operational data.

Pixel Data Visualization System (React)

- Engineered a high-performance visualization engine from scratch using React, D3.js, and WebGL to interactively render million-pixel semiconductor datasets — achieving ~70% faster render times and unlocking analysis workflows that were previously impossible in-browser.

YieldWerx Process Improvement

- Conducted deep-dive analysis of 11 end-to-end YieldWerx workflows, identifying bottlenecks and delivering targeted process optimizations that reduced cycle time by ~25% — along with a library of reusable templates that standardized operations going forward.

In-house Scheduling App (React + Firestore)

- Designed and shipped an internal team scheduling application (React, Firestore, Redux Thunk) from concept to production, reducing scheduling conflicts by ~40% and replacing a fragmented, manual coordination process with a single source of truth.

AI-Powered HTML/CSS Generator

- Pioneered an AI-driven HTML/CSS design generator that integrated GenAI APIs to convert design intent into responsive, production-ready prototypes within minutes — compressing multi-day design-to-code cycles into a near-instant feedback loop.

HP Label Designer (Angular + Konva.js)

- Built a full-featured HP Label Designer using Angular and Konva.js, enabling precise canvas-based label creation that was rapidly adopted across cross-functional teams — cutting label formatting errors by ~30% and eliminating costly manual rework cycles.

Software Engineer · Techlogix

Oct 2020 – Mar 2023

Campus on Cloud — Full-Stack Developer

- Developed and owned key modules of a full-stack campus management platform — covering student lifecycle, financial operations, and academic grading — using AngularJS/Angular 7, Kendo UI, and .NET Core in a complex, data-heavy environment.
- Redesigned and automated manual administrative reporting workflows, improving data accuracy for academic and finance teams and freeing staff from repetitive data entry through robust CRUD services and streamlined UX flows.

A C H I E V E M E N T S & A W A R D S

- Achiever of the Month — Techlogix (2021, 2022, 2023 & 2025): One of very few engineers to earn this recognition four separate times, reflecting sustained, year-over-year excellence in delivery, collaboration, and technical impact — not a one-off spike.
- 3rd Place — AI Hackathon, Techlogix (2024): Placed in the top three out of the full engineering organization, rapidly prototyping an AI-powered solution under competitive, time-boxed conditions and demonstrating applied GenAI problem-solving at a company-wide level.
